

**MEOAustralia**  
energy for the future

## Disclaimer

This presentation includes certain forward-looking statements that have been based on current expectations about future acts, events and circumstances. These forward-looking statements are, however, subject to risks, uncertainties and assumptions that could cause those acts, events and circumstances to differ materially from the expectations described in such forward-looking statements.

These factors include, among other things, commercial and other risks associated with estimation of potential hydrocarbon resources, the meeting of objectives and other investment considerations, as well as other matters not yet known to the Company or not currently considered material by the Company.

MEO Australia accepts no responsibility to update any person regarding any error or omission or change in the information in this presentation or any other information made available to a person or any obligation to furnish the person with further information.

# Artemis Prospect Overview

Technical Presentation to Shareholders following AGM, November 18<sup>th</sup>, 2009

## Prospect Elements

|                          |  |
|--------------------------|--|
| Reservoir                | Calypso and Legendre sandstones              |
| Trap                     | Structural                                   |
| Seal                     | Muderong and Athol, fault seal               |
| Source                   | Mungaroo Coals                               |
| Maturation and Migration | Demonstrated, favourable configuration       |
| Timing                   | Present day                                  |
| Preservation             | Good   |
| DHI's                    | Amplitude anomalies with common terminations |

All prospect elements have analogues in the immediately adjacent fields

# Reservoir

## Key Play Types in Carnarvon Basin, Artemis plays highlighted

Upper Jurassic Oil Play:

Angel equivalent sands subcropping Base Cretaceous Shales with Dingo Claystone as base seal

Legendre / Calypso Gas Play:

Barrier & shoreface sands in fault sealed and stratigraphic traps

Analogues:

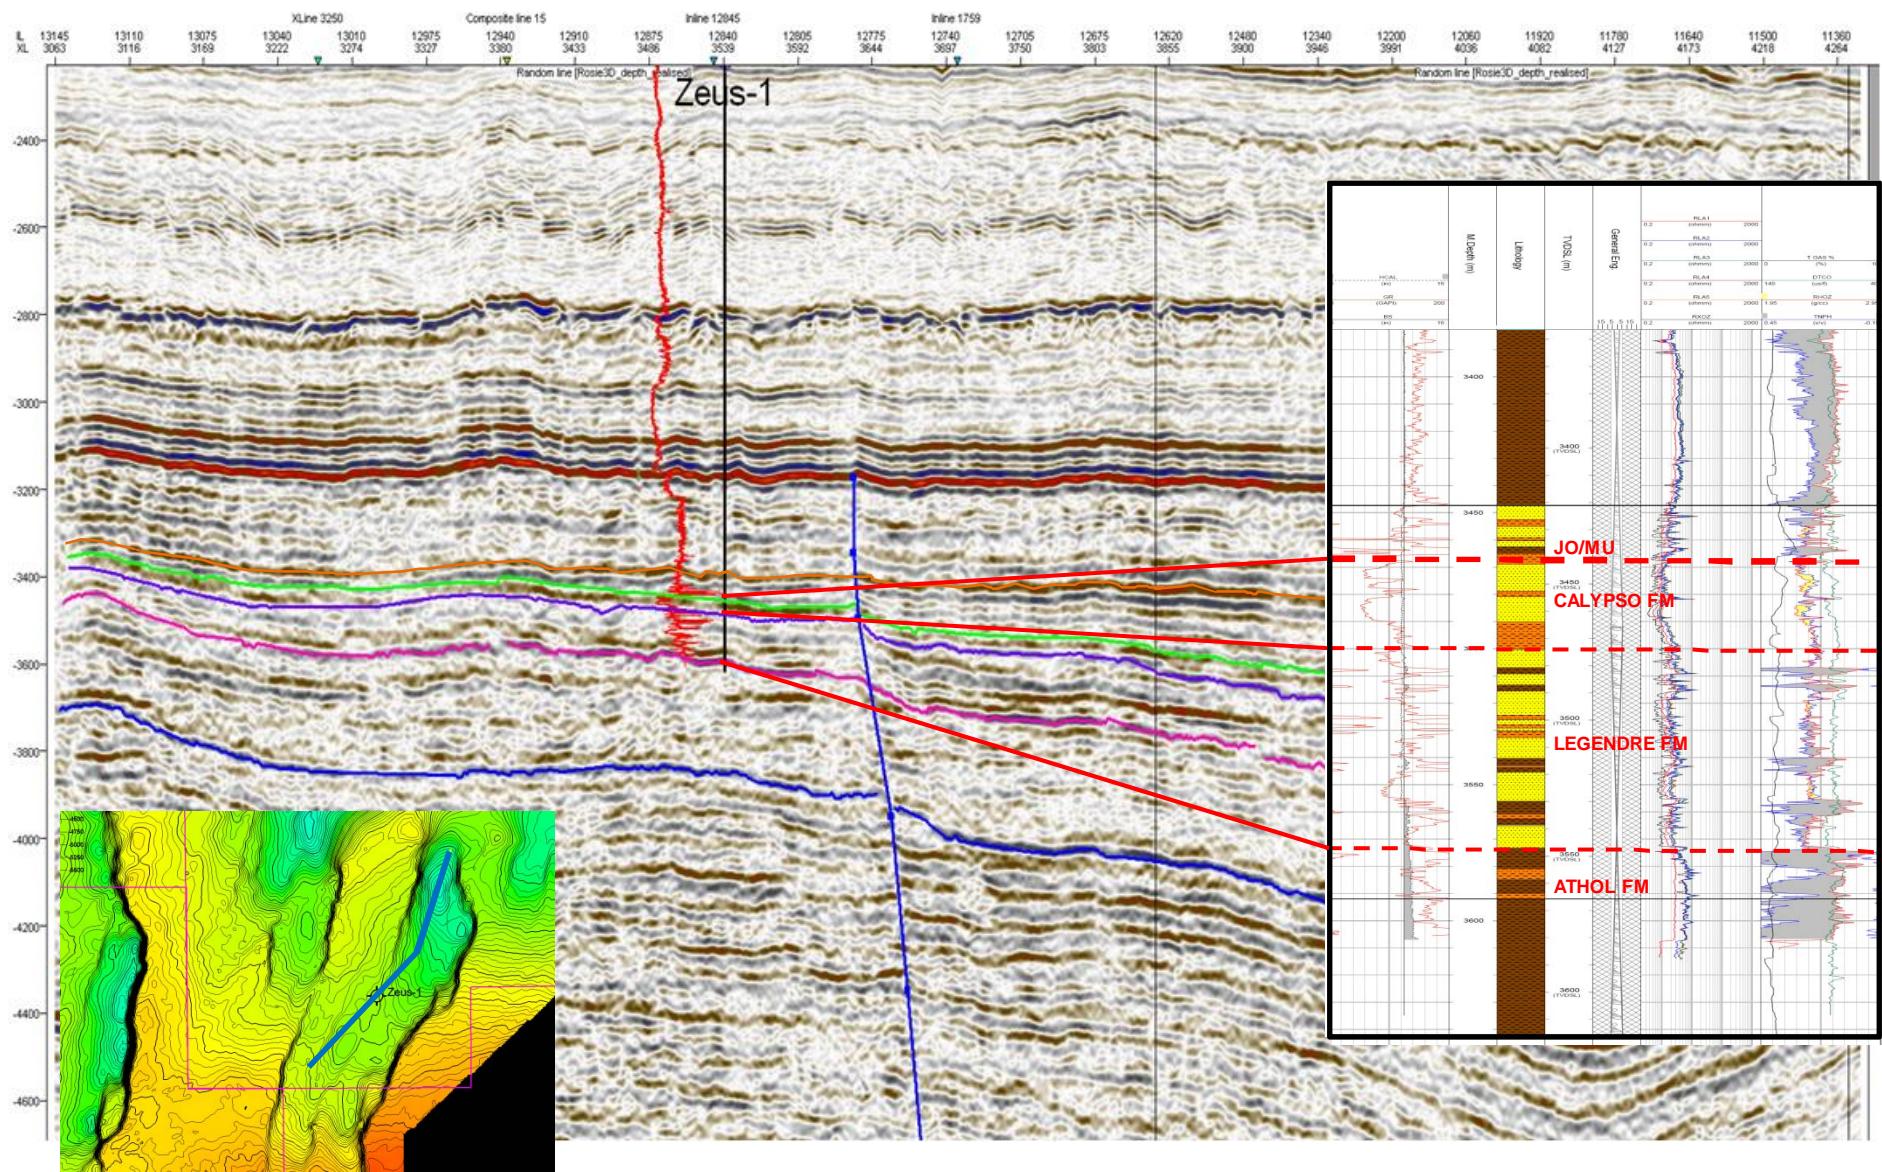

- Perseus Carnarvon Basin - 12 Tcf
- Persephone Carnarvon Basin - New Discovery

Late Triassic to Early Jurassic North Rankin Gas Play (+/- underlying Mungaroo):

North Rankin look-alike plus deep rollovers

# Reservoir calibration from Zeus-1

## Well tie showing seismic characteristics of Legendre and Athol

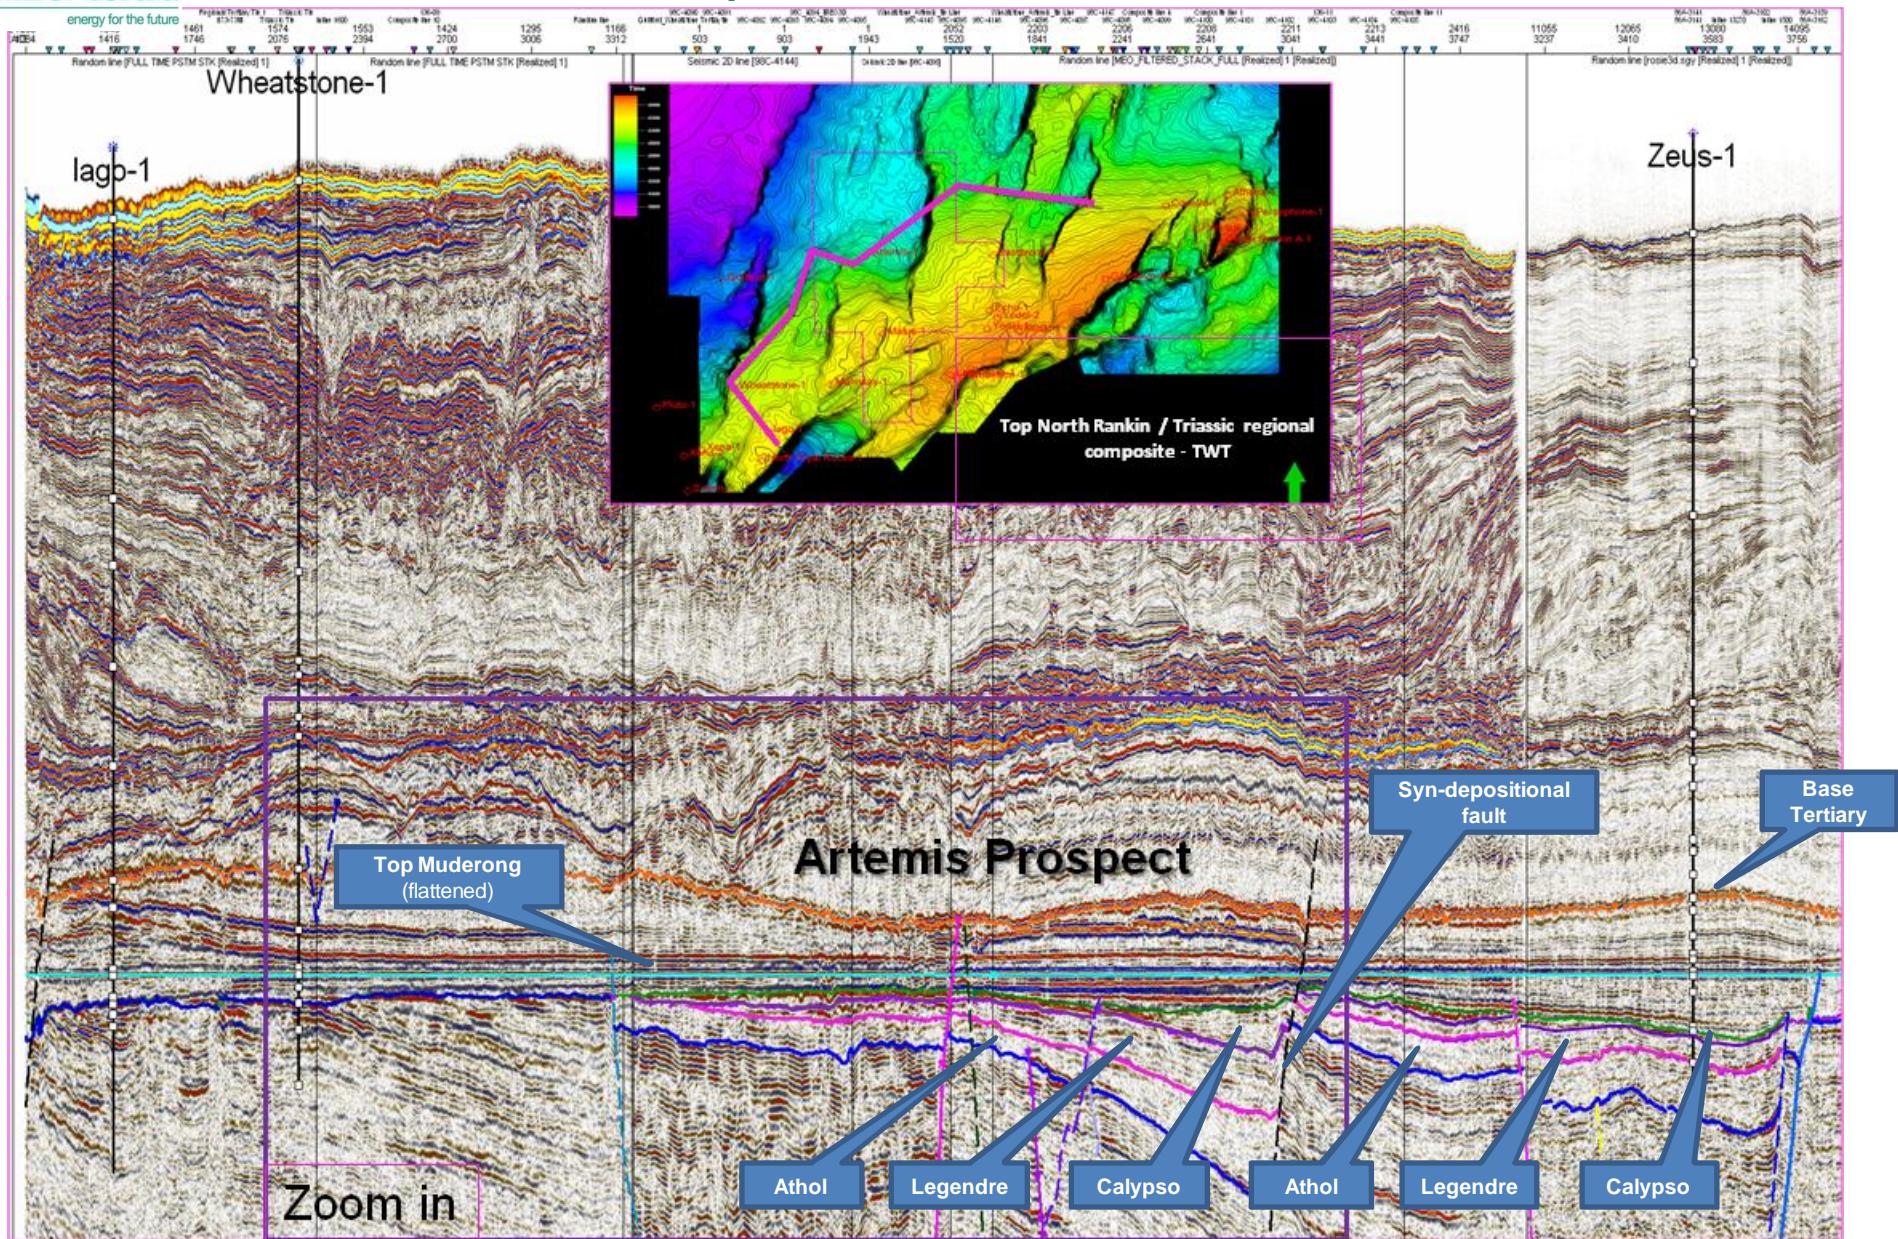

MEO Australia

# Reservoir Correlation Zeus to Artemis

## Composite 2D – 3D Seismic Line

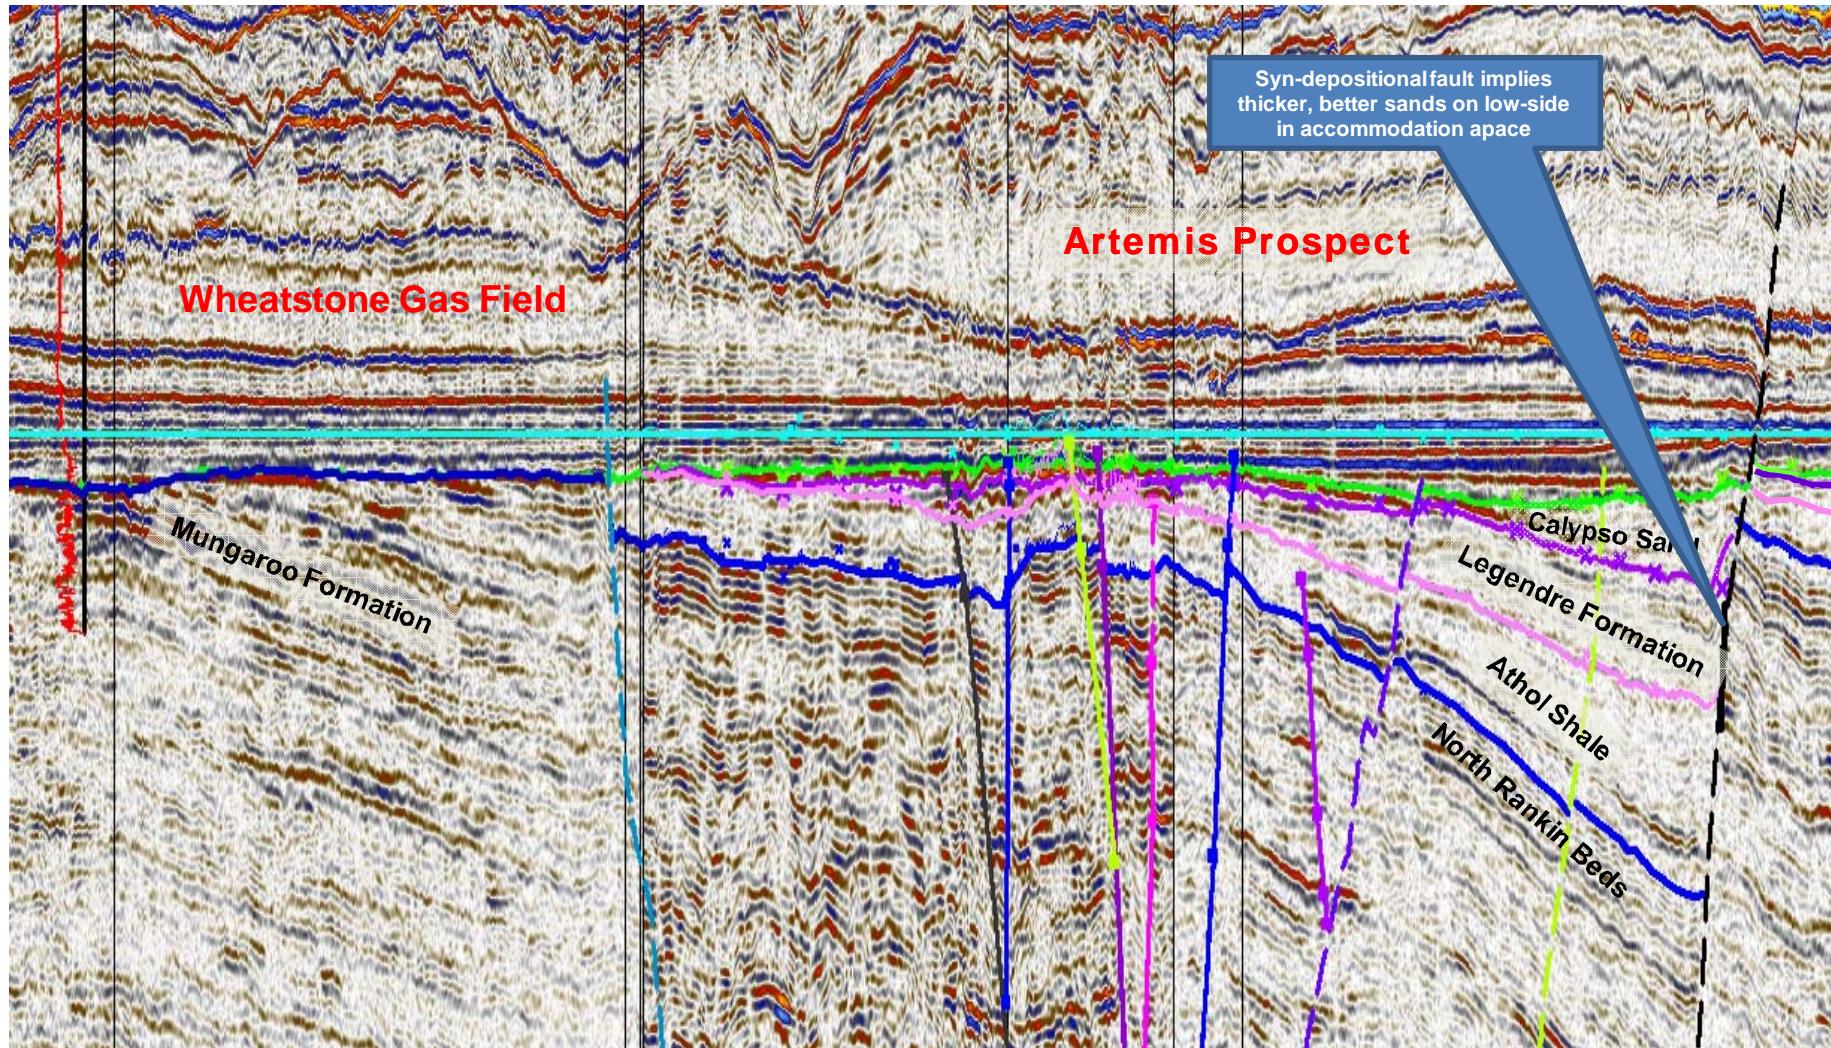

MEOAustralia  
energy for the future

# Zoom In of Composite Line with Artemis Prospect

Datumered on Muderong Shale

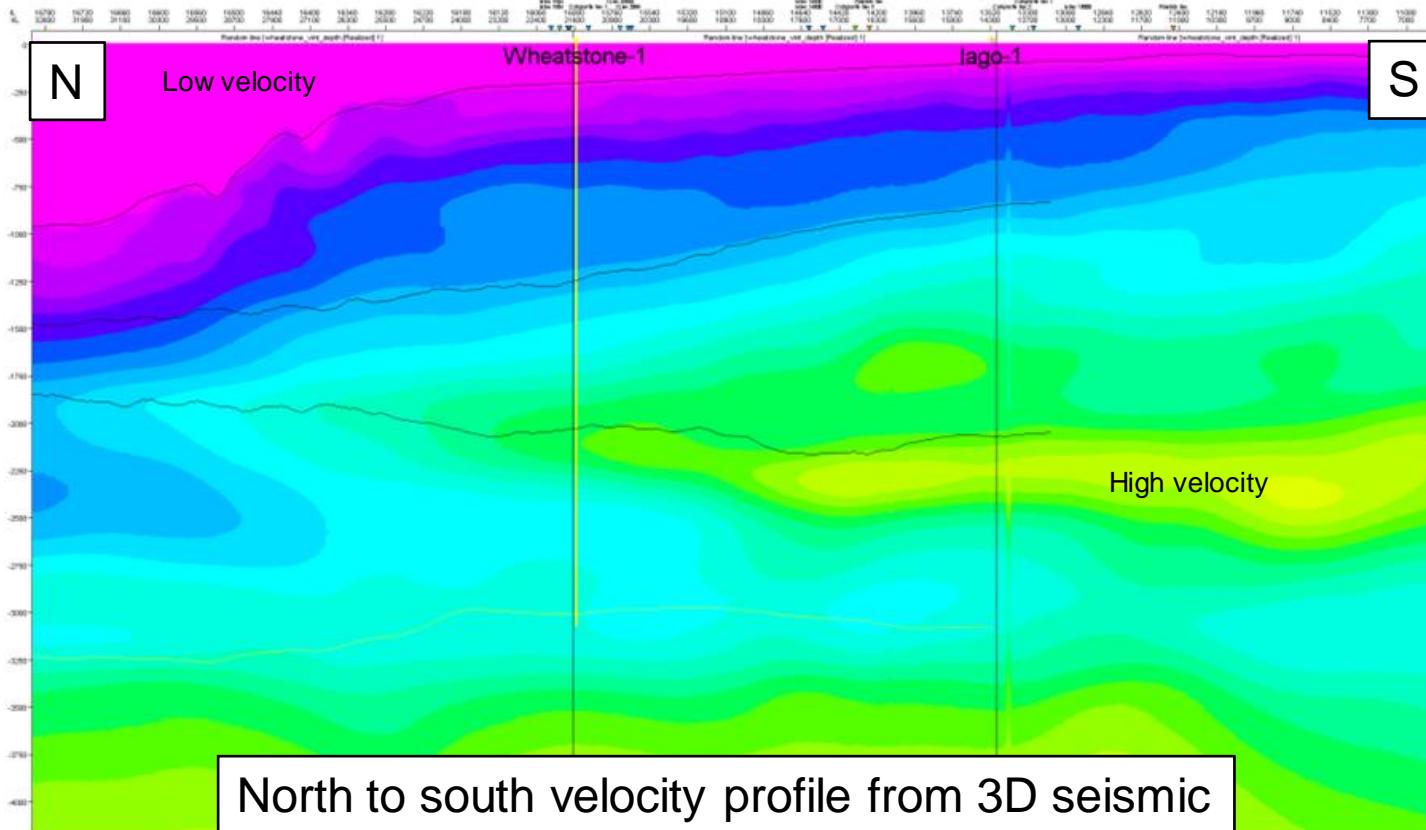

MEOAustralia  
energy for the future

# Velocity Controls

Regional and local effects cause velocity variations making Depth Conversion difficult

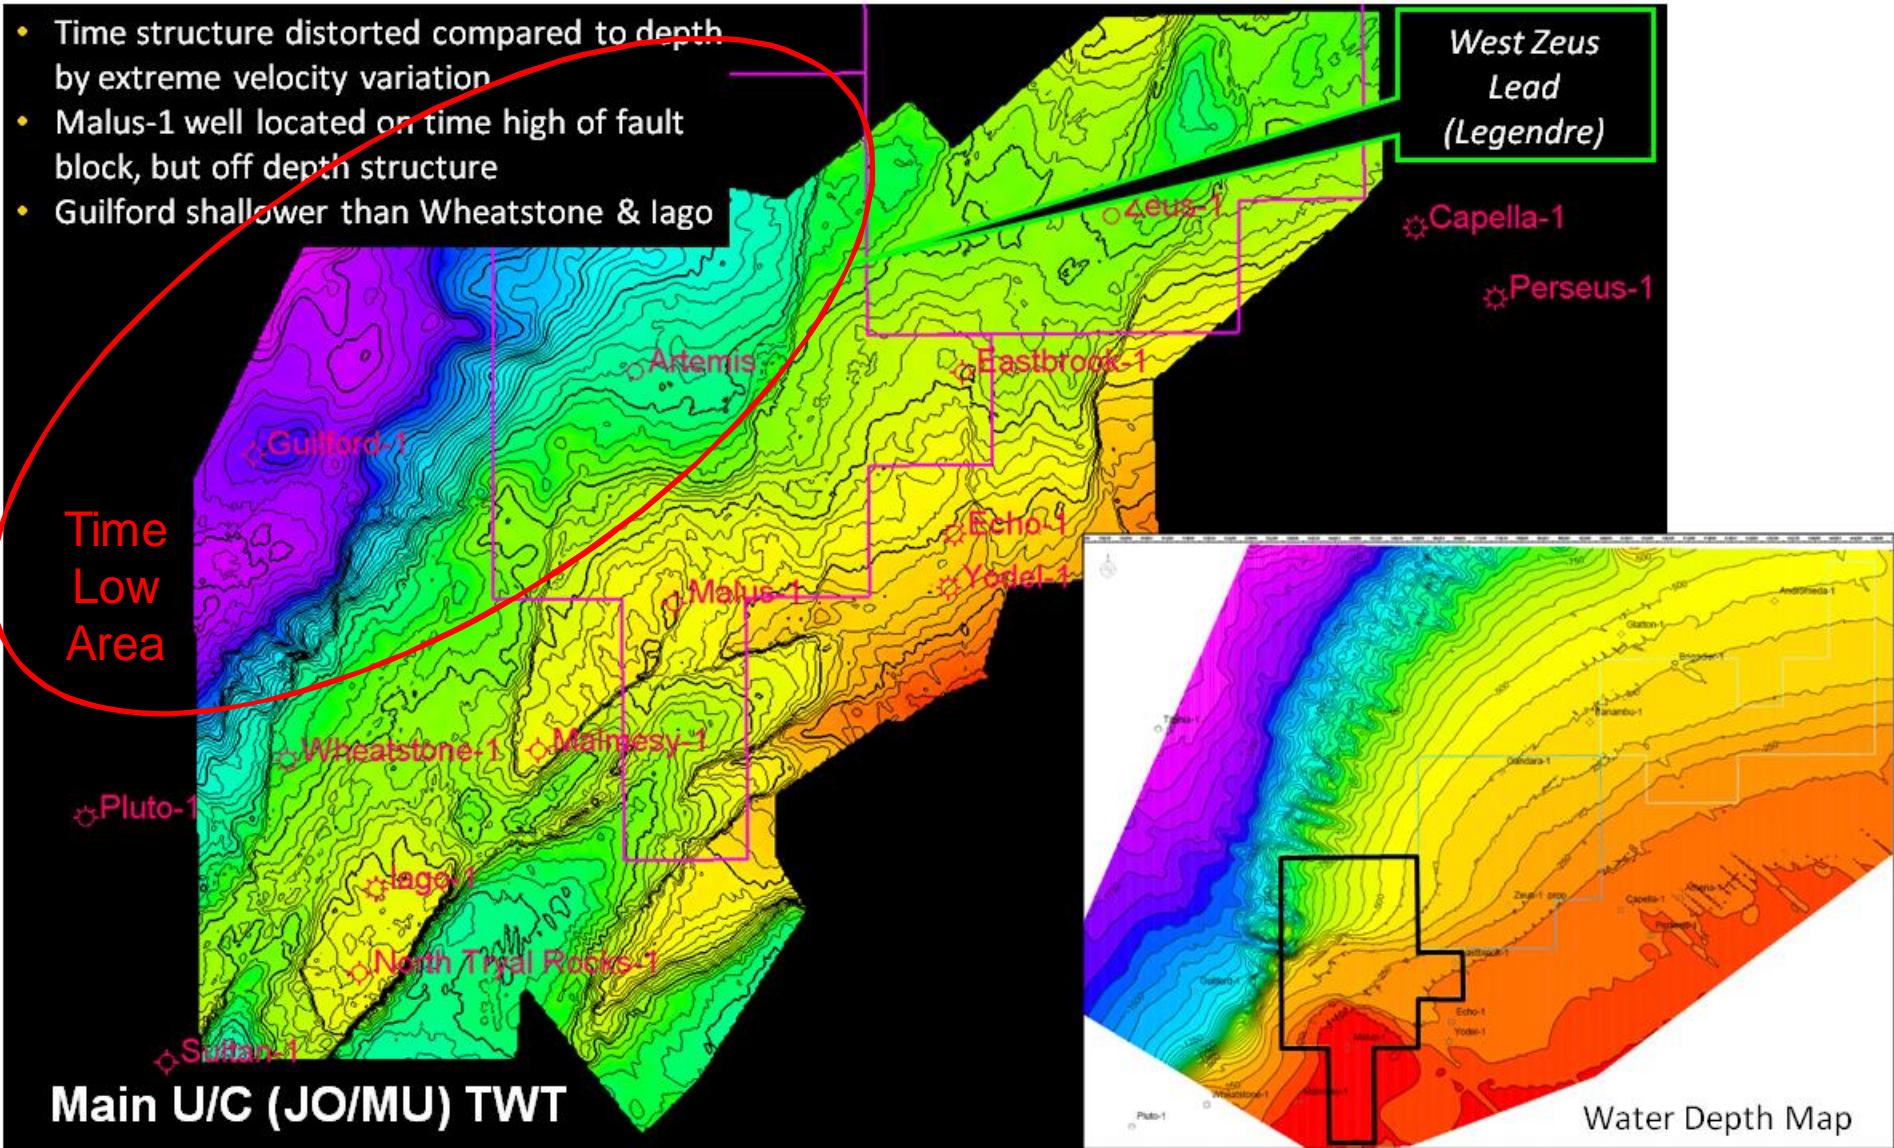

- Water depth
- Thickness of carbonate units
- Shallow reefs causing pull up
- Slow velocity in interpreted slope shale deposits
- Facies change shale to carbonate
- Seismic anisotropy
- Shelf slope effects
- Long wavelength / short wavelength effects

# Trap

Structures not apparent in TWT as depressed in north by velocities

Velocity data from new 3D seismic provides best solution

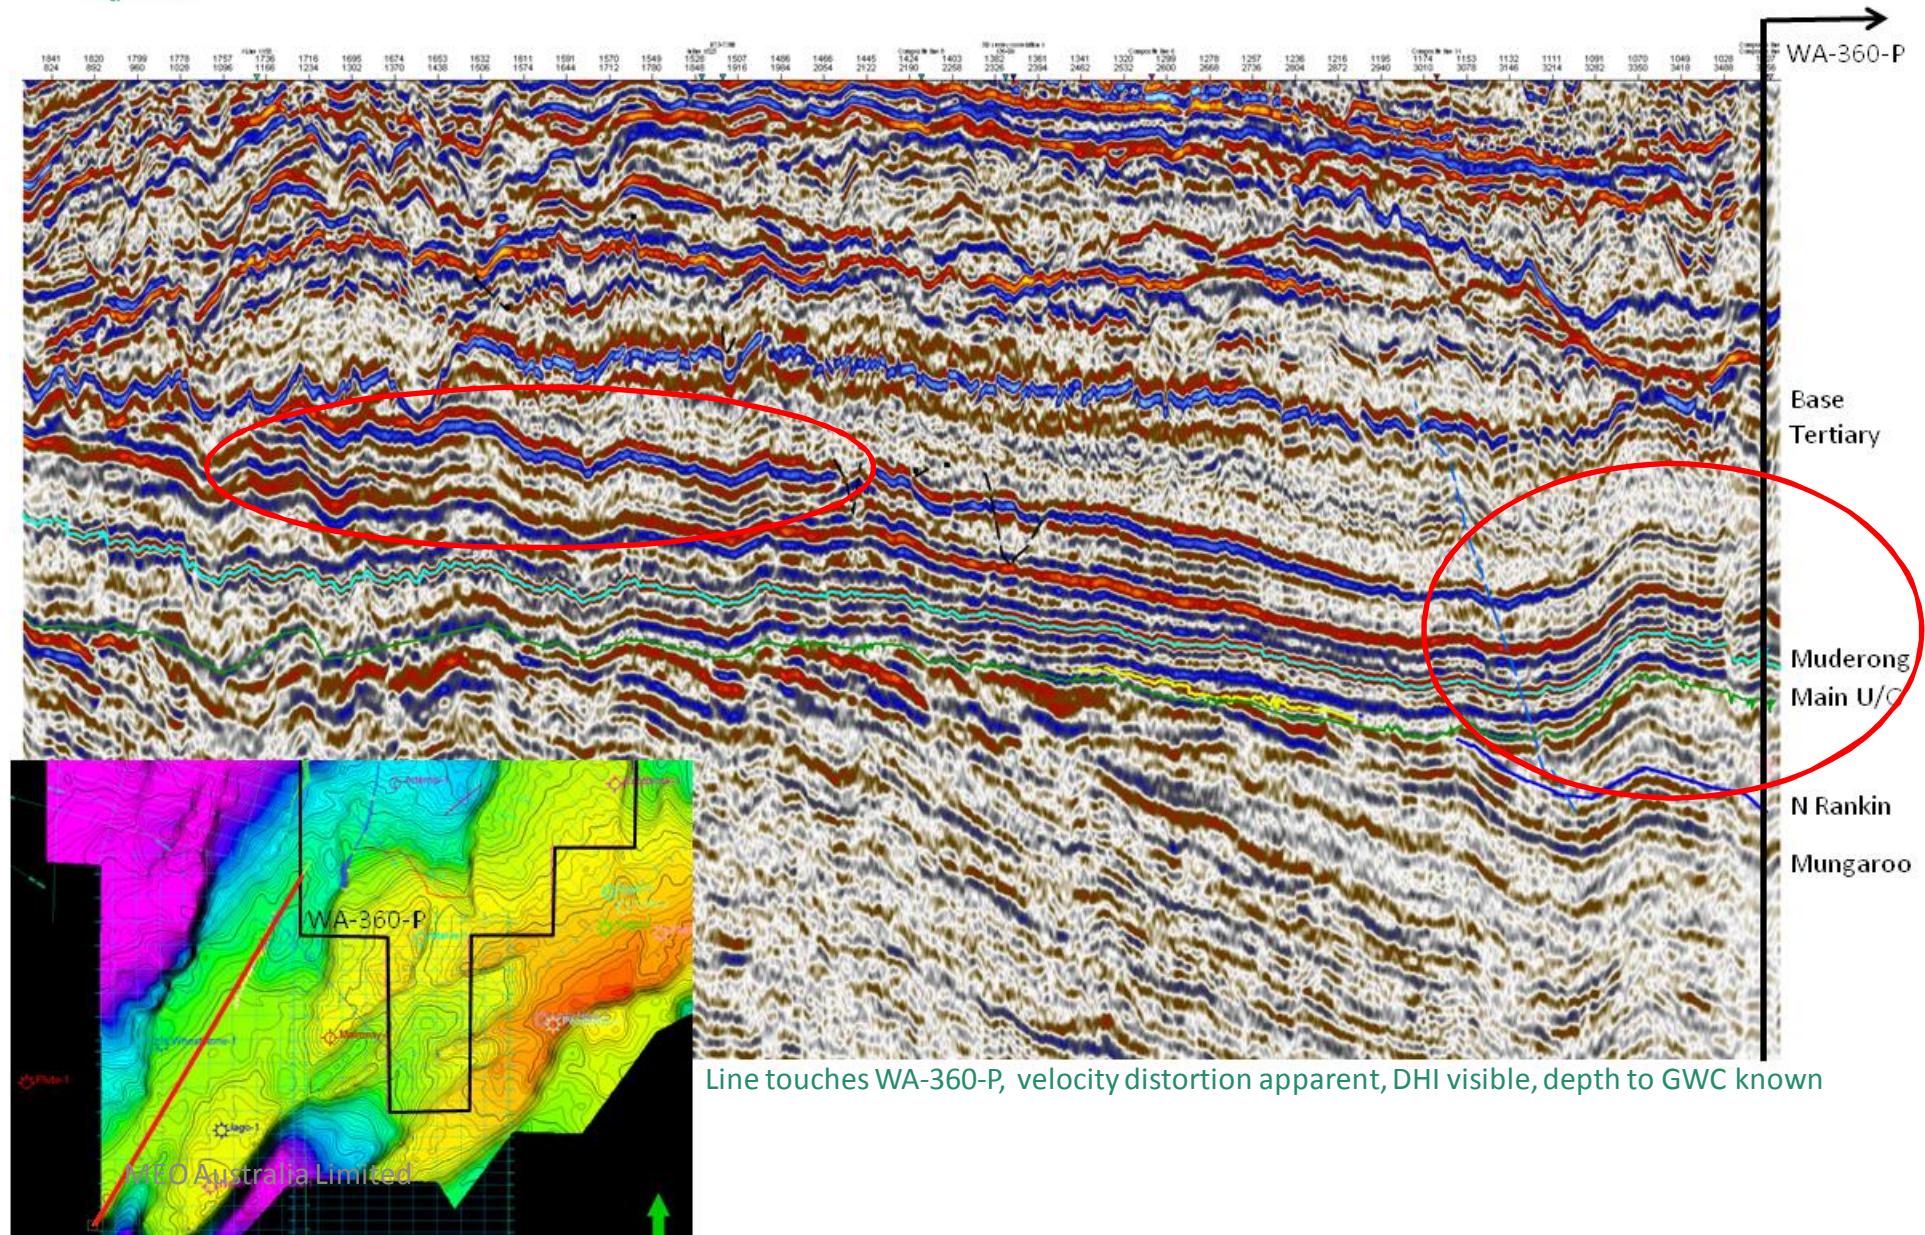

MEOAustralia  
energy for the future

# Wheatstone 3D line

“Strike” line along slope, velocity pull-up artefacts caused by channels, reefs

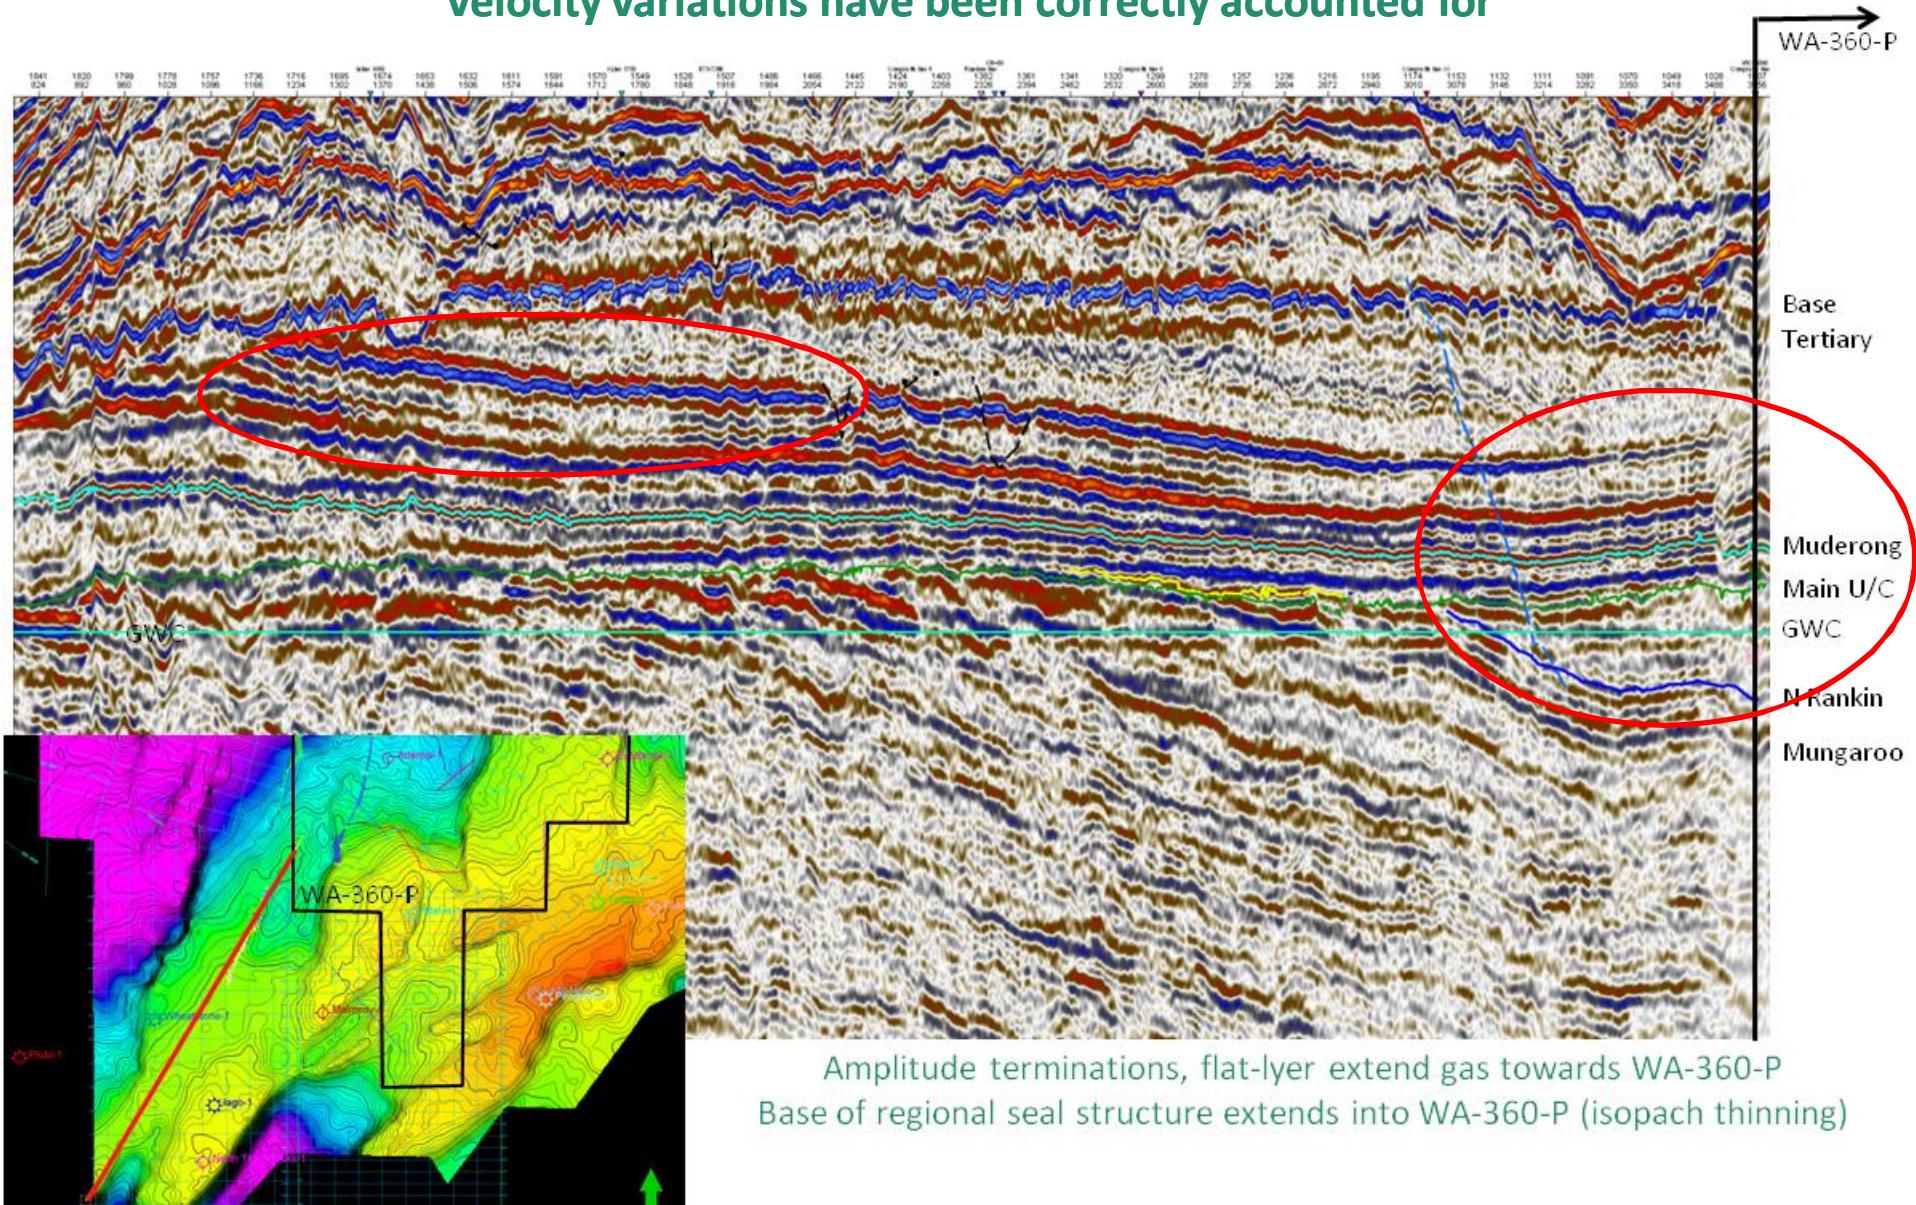

**MEOAustralia**  
energy for the future

# Seismic datummed on Wheatstone GWC

**Flattening on GWC has smoothed the overlying horizons, implying the velocity variations have been correctly accounted for**

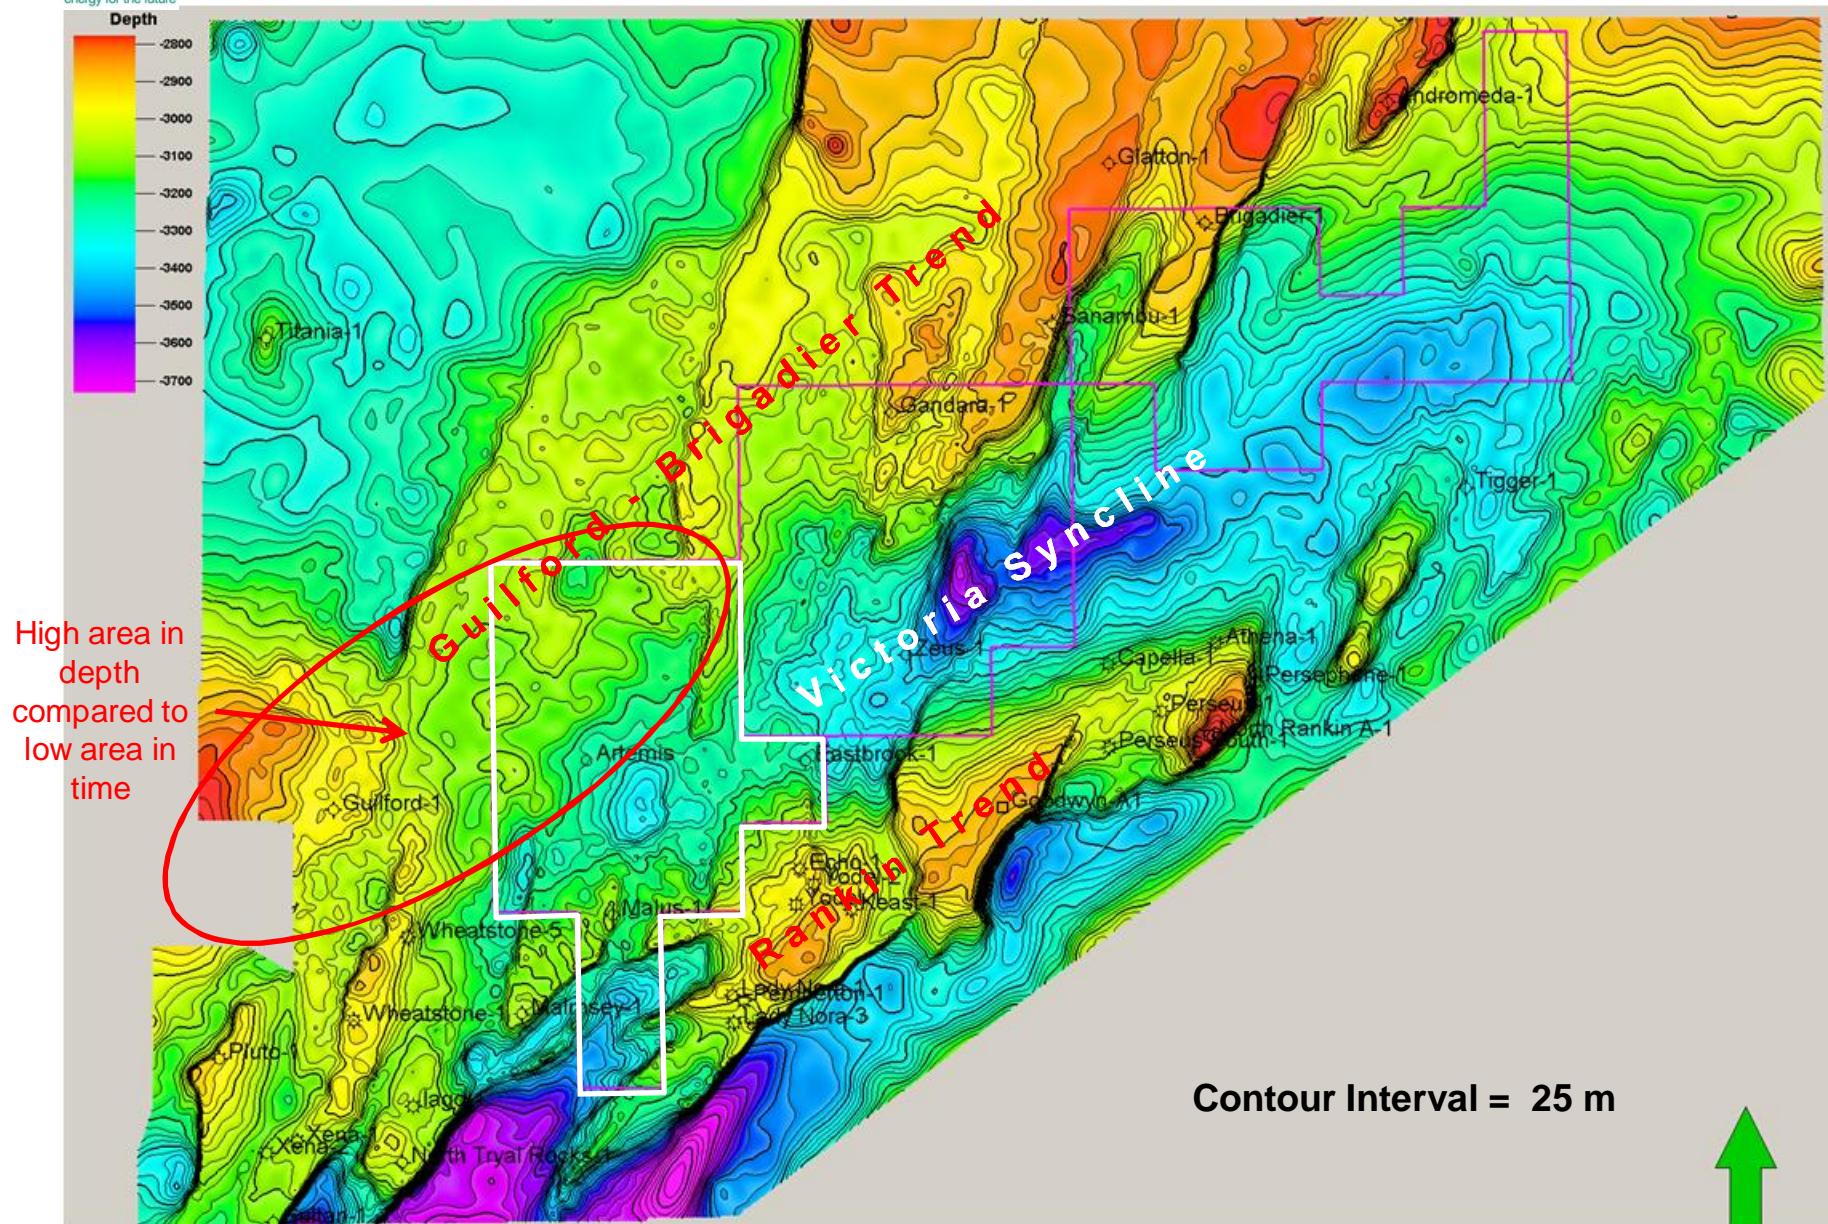

MEOAustralia

Play Chance = 100%

## Prospect Elements\*

|                                |      |  |
|--------------------------------|------|--|
| Reservoir Presence and Quality | 80%  | Calibrated with Zeus, paleogeography favourable                              |
| Trap**                         | 50%  | Seal to north (progrades, shale)   |
| Source Presence and Quality    | 80%  | Mungaroo coals, Eastbrook has reservoired gas                                |
| Seal Adequacy                  | 70%  | Muderong and Athol (base seal), fault seal                                   |
| Maturation and Migration       | 90%  | Modeling favourable, pathways simple. Eastbrook demonstrates northern source |
| Timing                         | 100% | Present day  |
| Preservation                   | 100% | Present day  |
| Overall COS                    | 20%  |  |
| DHI De-risking Multiplier      | 1.6x | Observed amplitudes, structural conformance                                  |
| Final GCOS                     | 32%  |  |

\*All prospect elements have proven analogues in the immediately adjacent fields

\*\*Trap chance will increase due to latest mapping demonstrating structural closure to north

## Artemis assessment input parameters

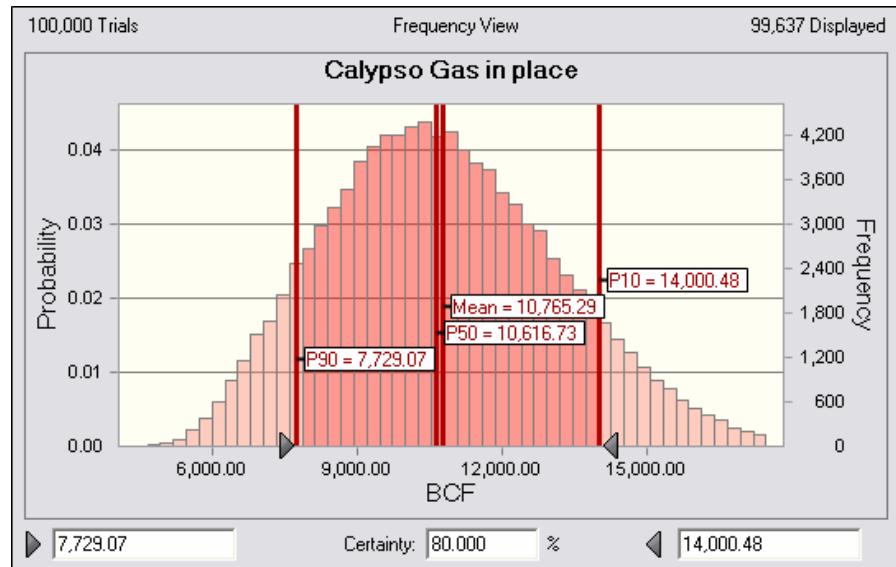

The BRV above an assumed GWC at -3275 metres has been calculated and supplied by MEO (Table 2). We have applied a +/- 5% variation to these figures, and input them to the Monte Carlo simulation as triangular distributions.

| BRV 10 <sup>6</sup> m <sup>3</sup> | Calypso Fm | Legendre Fm |
|------------------------------------|------------|-------------|
| WA 360 P                           | 20,650.2   | 23,769.2    |

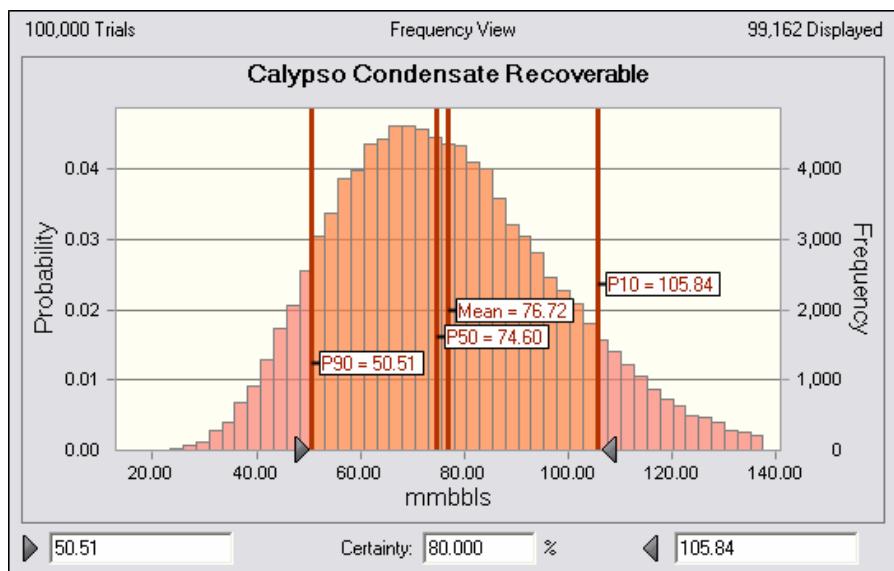

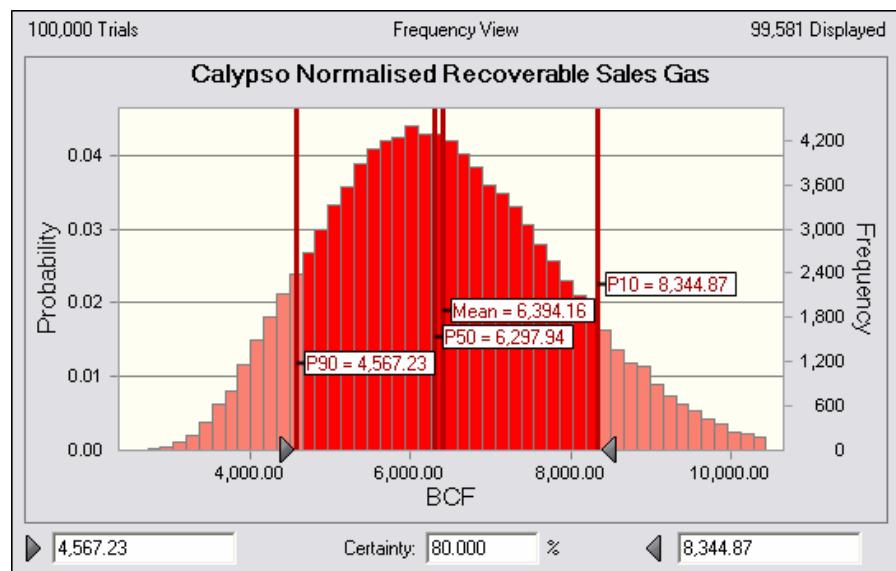

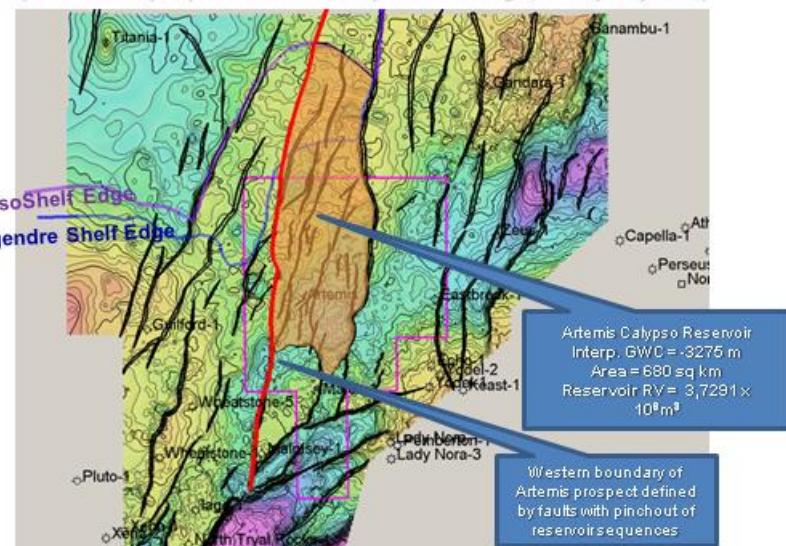

**Table 3. Reservoir Input data.**

| Parameter            | Distribution | Calypso Formation            | Legendre Formation           |
|----------------------|--------------|------------------------------|------------------------------|
| Net to Gross         | Triangular   | 25% - 45% - 70%              | 15% - 35% - 70%              |
| porosity             | Triangular   | 17.0% - 22.0% - 25.0%        | 15% - 20% - 22%              |
| Gas Saturation       | Normal       | 70% with 4% std dev          | 70% with 4% std dev          |
| Gas Expansion factor | Normal       | 212 with 5% std dev          | 212 with 5% std dev          |
| Gas recovery         | Normal       | 60% with 3% std dev          | 60% with 3% std dev          |
